furkanberkant.github.io

Backend Software Engineer specializing in **high-performance microservices** and **event-driven architectures** for scalable distributed systems. Delivered **50%+ latency reduction** through asynchronous processing, strategic caching, and query optimization. Developed real-time data processing services handling **60K+ connected endpoints** using Kafka, Cassandra, and PostgreSQL. Experienced in Java, Spring Boot, distributed systems, Kubernetes, and cloud-native technologies across IoT and data-intensive domains.

Professional Experience

- 10/2023 – 02/2026

Software Engineer, Comodif
 - Optimized critical API performance by **50%+** (p95 latency) through asynchronous parallel data loading, **Redis/Caffeine** caching strategies, and database query optimization
 - Developed **Kafka consumers and producers** for real-time telemetry processing across **2 projects**, implemented data handlers and mappers, built services for storing and retrieving device data in **Cassandra**
 - Built customer support system integrating **Slack API** for real-time support requests from mobile applications, improving customer response time and enabling instant issue resolution
 - Developed data services using **Cassandra** for high-volume telemetry ingestion and **PostgreSQL** for transactional operations, created **Liquibase** migrations for schema management
 - Deployed and managed microservices using **Docker** and **Kubernetes** with **Helm** charts, configured **ArgoCD** for GitOps-based deployments and contributed to CI/CD automation via **GitHub Actions**
 - Implemented observability infrastructure with **Prometheus** and **Grafana**, created monitoring dashboards for platform health and performance metrics, built **Slack alerting** system for Kafka lag and service health issues across **60K+ connected devices**
 - Collaborated in **10+ member cross-functional team** using Agile methodologies, participated in code reviews and pair programming sessions
- 01/2021 – 05/2021

Python Developer, Otoparcasan
 - Developed REST API integrations with major Turkish e-commerce marketplaces (Gittigidiyor, N11, Hepsiburada) for automated product and order synchronization

Technical Skills

Languages & Frameworks: Java (Proficient), Spring Boot, Spring Cloud, Python
Messaging & APIs: Apache Kafka, Protocol Buffers, gRPC, REST APIs
Databases: PostgreSQL, Apache Cassandra, Redis, Microsoft SQL Server
Performance: Asynchronous & Concurrent Programming, Caching (Redis, Caffeine), Query Optimization
DevOps & Cloud: Docker, Kubernetes, Helm, GitHub Actions, ArgoCD, CI/CD, GitOps
Monitoring & Observability: Prometheus, Grafana, Loki
Methodologies: Microservices Architecture, Event-Driven Design, Agile/Scrum

Education

- 09/2019 – 07/2023

Statistics and Computer Science (Bachelor's Degree), Karadeniz Technical University
Trabzon, Turkey

Focused on software development, statistics, and optimization.

Certificates

- IBM Explore Emerging Tech
- IBM Introduction to DevOps
- IBM Introduction to Agile Development and Scrum
- IBM Getting Started with Git and GitHub
